

MI-02 : CERTIFICATION FOR LITTELFUSE STARTCO PRODUCTS

Certifications and standards for products can be found in the product manual.

North America

Most Littelfuse Startco protective relays are tested to U.S. and Canadian standards by CSA International, an OSHA nationally recognized testing laboratory. The certified products are marked with one of the following labels:

A CSA mark with the indicators "C" and "US" or "NRTL/C" means that the product is certified for both the U.S. and Canadian markets, to the applicable U.S. and Canadian standards. If a product has features from more than one area, the mark indicates compliance to all applicable standards.

UL and CSA have implemented the second phase of a 3-phase, 18-month pilot agreement allowing the mutual acceptance of certain components used in low-voltage distribution equipment and industrial control systems. Under this memorandum of understanding, products certified or listed to both U.S. and Canadian standards are accepted by both organizations. For more details, visit the internet links below.

Australia

Most Littelfuse Startco products meet Australian electromagnetic compatibility requirements. Products for sale in Australia and New Zealand are marked with the C-tick label. Certain protective relays comply with the requirements for Australian and New Zealand standard AS/NZS 2081.

See the internet links below for more information.
